How to cancel a pop up?

so I am making a to-do list. When you remove a task from the red trash button, it asks you if you want to delete it or not. And "cancel" should remove the question and the task will stay. But it doesn't, the question stays and I have looked everywhere, but nothing works and the question doesn't disappear. Can you help me with removing the question when you click "cancel". Here is code(JS):

"E: Package 'python3-pip' has no installation candidate" when installing pip3 on Debian 12

my linux system was working just fine and then I messed up when dealing with Java. Couldn't get JDK17 to install and finally installed it manually. Now with pip3 same thing again... I get "E: Package 'python3-pip' has no installation candidate" when running:

```
sudo apt-get install -y python3-pip
```

JupyterLab - syntax issue

Fresh to JupyterLab notebook. The syntax are not highlighted as they should be, the In and Out text beside each cell is also not present. Previously it has been. I'm guessing this is a very obvious fix but I am clueless at the moment.

Tried alterative browsers. Resetting Kernels.

InvalidOperationException for GraphQL 7.8.0 in C#

I'm getting the following exception when I run my code (my target framework is currently .NET 6.0):

Exception Occured: System.InvalidOperationException: The type 'System.ReadOnlySpan`1[System.Char]' of property 'Span' on type 'GraphQLParser.ROM' is invalid for serialization or deserialization because it is a pointer type, is a ref struct, or contains generic parameters that have not been replaced by specific types.

Wagtail VScode Quick Fix

How to get wagtail related suggestions (for example wagtail import statement) in VsCode Quick Fix? I have tried many ways with no success. Is there anyone that has Quick Fix working with Wagtail ?

Should I install some VScode extensions?
